Dr. Dinesh Kumar

Dr. Devesh Garbiyal

Welcome to All the Guest ,Participants And Students. Archaeological exploration is the study of ancient human life through material remains. Archaeologists search for artifacts like tools, pottery, bones, and buildings. These remains help us understand past cultures and civilizations. Different tools and scientific methods are used to locate and study sites. The main aim is to learn about human history and development..

**Dr. Jyoti Tamta
Organizing Secretary**
